Communication without identities

unpruuf and safeline: the whistleblower channel for your organisation

Screens: real dashboard, demo data · Phone: illustration

Gabriel Hategan · NexonAI Consulting SRL

NEXONAI CONSULTING

THE SERVER

The server belongs to the customer

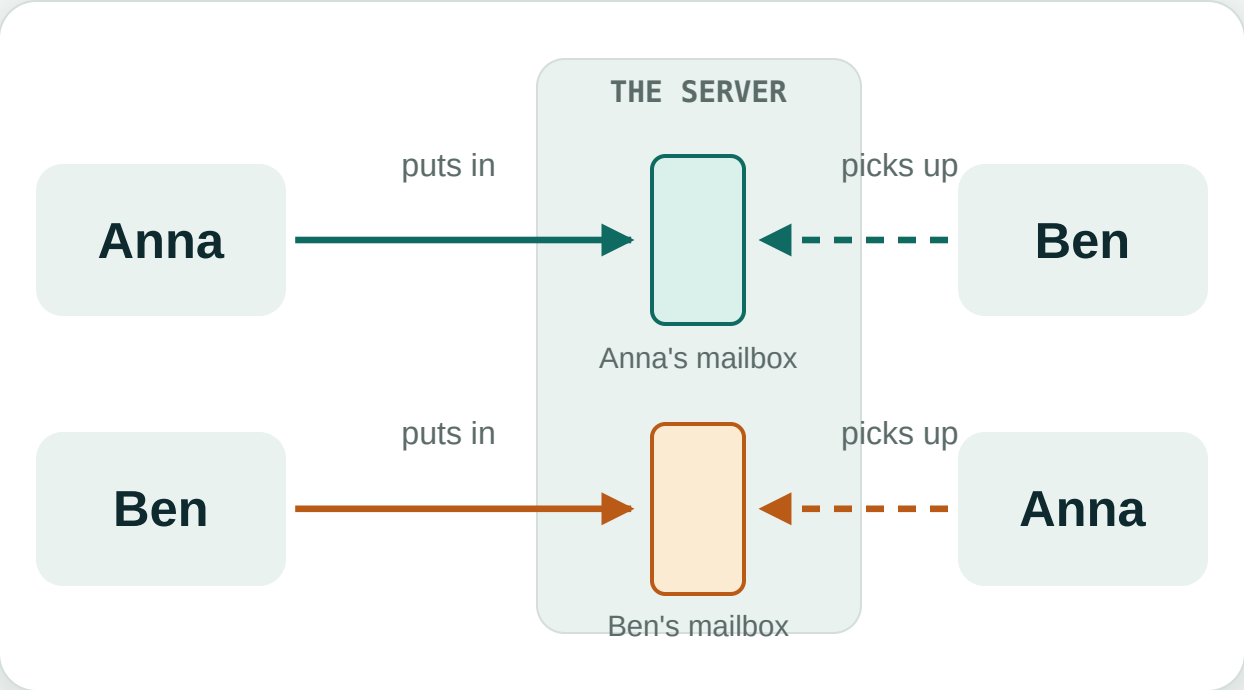

1. The customer gets the server solution from us, ready to start. It is their server.
2. Completely anonymous addresses that only they know.
3. Nothing stays on the server: after 24 hours at most, everything is gone.

NexonAI: no access

The precondition for everything: every customer runs their own servers. Otherwise third parties are involved. NexonAI runs nothing.

The principle: a mailbox system

1 — No identities

No accounts, no names, no phone numbers.

2 — No direct connections

Nobody writes directly to anyone. There is no line between two people.

3 — The mailbox

I put the message into my mailbox, on my server, and give my contact the details to pick it up. The same the other way round.

What stays in the mailbox is gone after 24 hours at most.

What the server knows: almost nothing

Illustration, random values

1

If someone breaks into the server

They find encrypted packets, all the same size, at most 24 hours old. That is all.

2

If a court orders the server seized

The seized server gives the same: nothing readable, no names, no history. The case files are not on it.

3

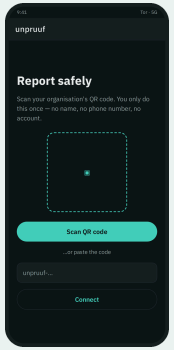

If someone asks NexonAI

We have nothing to hand over: we do not run the server, we have no access and we have no copy.

Whoever breaks in finds data junk. With us there is no vault worth cracking.

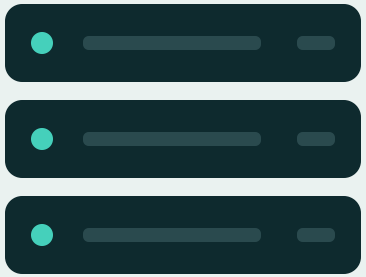

Screens: real dashboard, demo data · Phone: illustration

safeline: three products

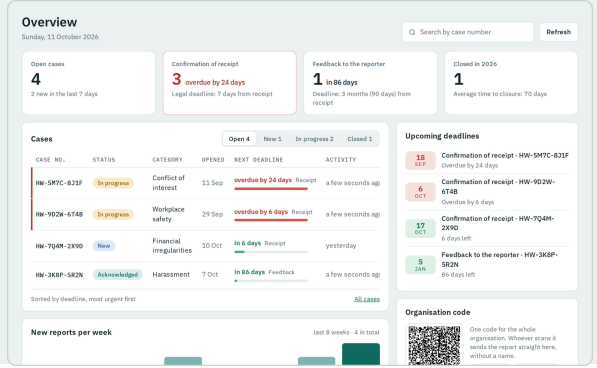

The mobile app

for employees

The server

the organisation's own

The dashboard

for the compliance officer

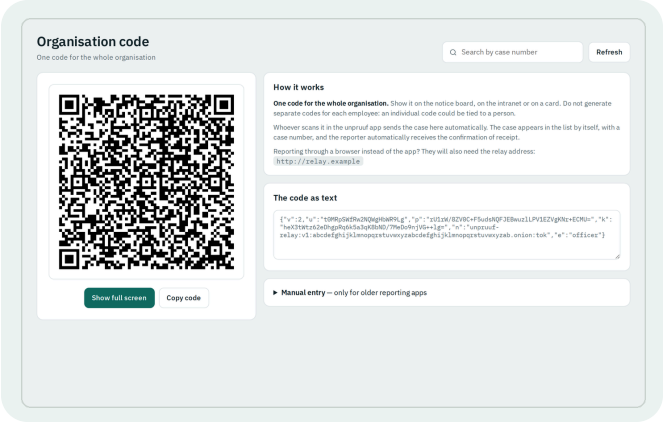

READY FROM US

- ✓ The legal deadlines, already in the dashboard: 7 days and 3 months
- ✓ A case number for every report
- ✓ The confirmation of receipt goes out by itself
- ✓ The organisation's QR code, ready to hand out

NEXONAI CONSULTING

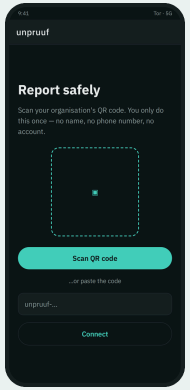

Screens: real dashboard, demo data · Phone: illustration

One QR code. One case in the dashboard.

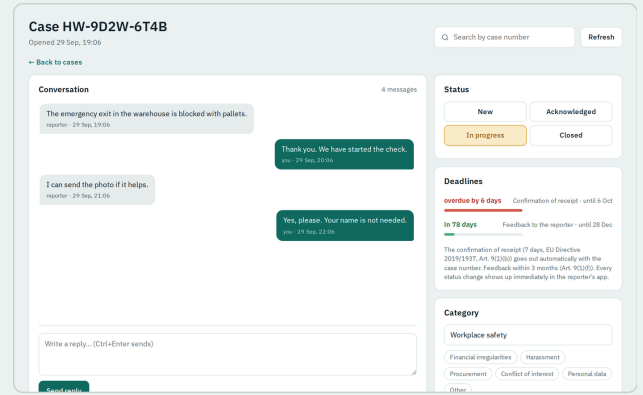

1 · The QR code

the officer generates it, employees receive it

2 · Scan and send

a new case, without a name and without an account

3 · In the dashboard

with a case number, stored on receipt

The confirmation of receipt goes out by itself, with the case number. The dashboard has no delete function.

THE DATA

Only the customer has their data

GDPR

- The organisation is the data controller. The data is in one place, with it.
- NexonAI has no access and is normally not a processor.
- The duties stay with the organisation: legal basis, informing people, the record, retention, breach reporting within 72 hours.

INTERNAL AUDITS

- One place to check: the server, the dashboard and the officer's laptop, all with the customer.
- Cases are stored on receipt. The dashboard has no delete function.
- Nothing to request from a third party.

IN GENERAL

- No third party sits between the reporter and the officer.
- A request from the authorities goes to the organisation, the only one that has the data.
- There is no central account that could be broken into.

We do not claim GDPR compliance. Your data protection officer or a lawyer confirms it.

HONEST

What I cannot promise you

- ! This is a pilot, not a finished, certified product.
- ! It has not yet been audited by an independent party.
- ! It does not replace legal advice.
- ! Some parts I have tested in the lab.

I tell you this openly. Trust starts with what I cannot do.

THE PILOT AND THE INVITATION

We start at the University “1 Decembrie 1918” of Alba Iulia

We are looking for 2–3 pilot partners from professions with a duty of confidentiality. We start small, measure, adjust together.
