NEXONAI CONSULTING SRL

unpruuf Compliance

The reporting channel that only your organisation runs.

For employees who have something to report. For the officer who has to handle it by the deadline.

HOW UNPRUUF WORKS

What do you need to communicate securely?
A system of your own.

Every customer gets their own secure, anonymous system, and only they manage it.

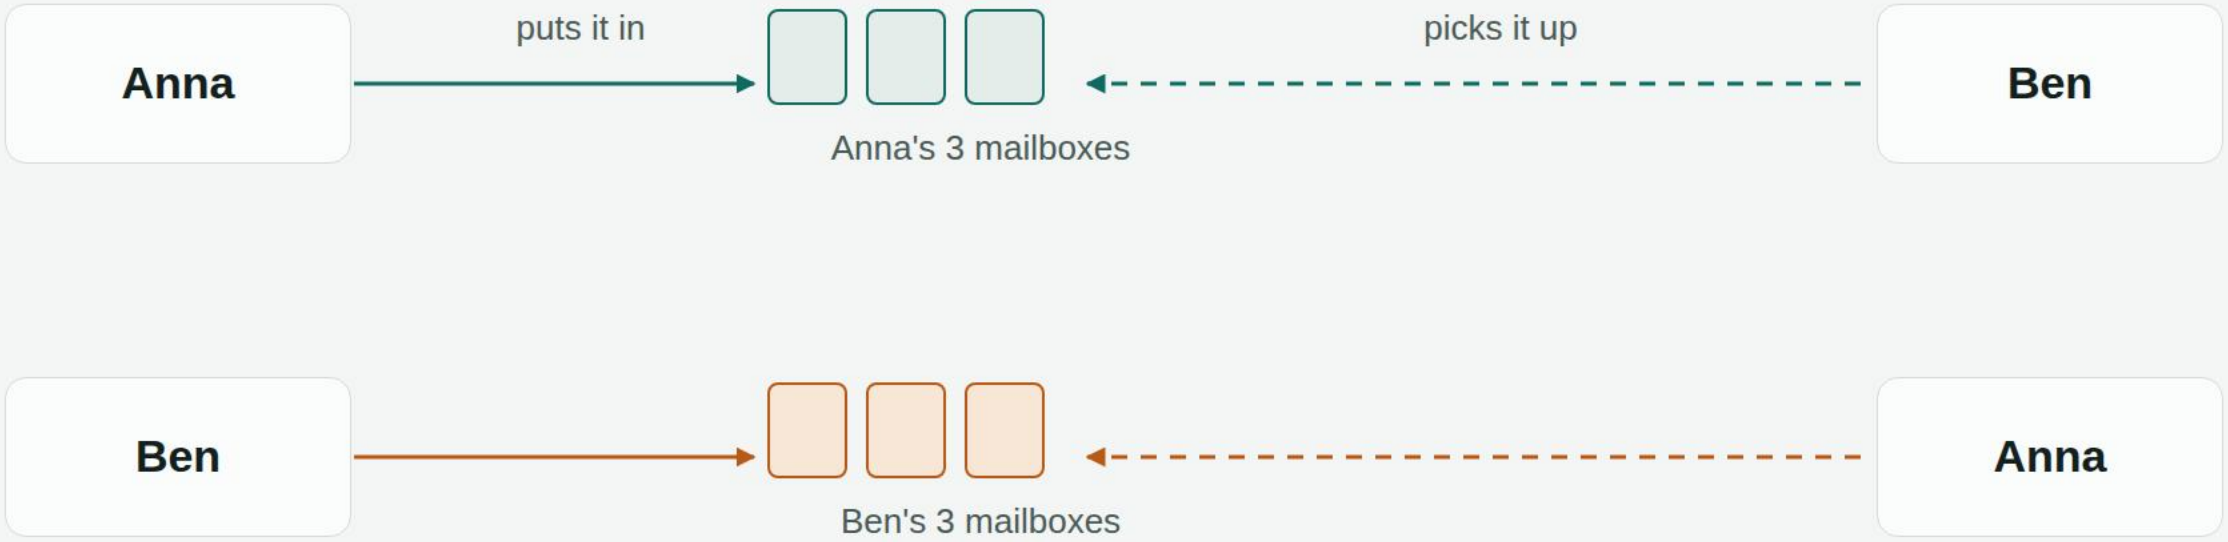

A phone
To write and read.

Your own post office
A PC, laptop or, better, a server.

HOW UNPRUUF WORKS

250 mailboxes. 3 for every contact.

On each of your post offices you have 250 mailboxes. For every contact you pick 3 and give them those addresses.

HOW UNPRUUF WORKS

I never address anyone else.

I put something on my own devices and tell someone where it is. That is why there is no direct line between two people, and nothing the system could hand over.

Junk instead of a vault

Whoever breaks in finds junk, at most 24 hours old. There is no vault worth cracking.

Even the operator is blind

The server holds no key and no names. If a court asks, there is nothing readable to hand over.

The intelligence is on the devices

Whoever gets access to the infrastructure finds nothing useful.

THE DUTY

An internal reporting channel with fixed deadlines

EU Directive 2019/1937: organisations with 50 or more employees must offer an internal reporting channel. In Romania this is Law 361/2022.

Day 0

The report arrives

The case opens, both deadlines start by themselves.

7 days

Confirm receipt

The reporter gets the confirmation with the case number.

3 months

Give feedback

The reporter hears what was done.

THE PROBLEM

Most channels ask people to trust someone

A platform

Somebody else runs it and could read along.

Email or phone

Address, number and time give the reporter away.

A promise

The protection sits in a contract, not in how it is built.

People who fear retaliation do not report through a channel they have to trust. unpruuf Compliance is built so that nobody has to.

UNPRUUF COMPLIANCE

One code on the wall.
One case in the dashboard.

1

Scan

The employee scans the organisation's one QR code and writes.

2

Case opens

The officer sees a new case with a number and running deadlines.

3

Answer

The officer replies and sets the status. The reporter sees it on their phone.

FOR THE EMPLOYEE

Report without giving yourself away

~~Account~~

~~Email address~~

~~Phone number~~

~~Visible app icon~~

Scan and write

One code, the same for everyone. Nothing to type, nothing to copy.

A case number

A random number, never consecutive. It comes back by itself, together with the confirmation.

See where it stands

Status and deadlines appear in “My cases” on your phone. Two reports from one phone look like two different people.

FOR THE COMPLIANCE OFFICER

Case files with deadlines, not just a chat

ILLUSTRATIVE EXAMPLE

Case	Status	Receipt	Feedback
HW-…-A	New	6 days left	89 days left
HW-…-B	Confirmed	done	61 days left
HW-…-C	In progress	done	12 days left

- Cases appear by themselves, with a case number.
- Both legal deadlines run automatically.
- Reply, set a category, change the status. The reporter sees it at once.
- The case files stay on the officer's laptop, protected by a password.

FOR THE ORGANISATION

A channel you own and can show

Yours, not a vendor's

It runs on your own hardware. NexonAI runs no servers.

One channel per site

Separate channels for locations or departments, each with its own officer.

Deadlines under control

Nothing slips: every open case shows what is due and when.

You announce one code, on the notice board or in the intranet. There is no list of who has reported, because nobody is registered.

HONEST ANSWER

Who sees what

Who	Sees the report	Knows who wrote it
The compliance officer	Yes	Only if the reporter says so
Your IT administrator	No	No
Colleagues, management	No	No
NexonAI	No, we have no access	No

The browser option protects less than the app: someone who sees the network traffic may learn that a report was sent. The app is the recommended way when retaliation is a risk.

GETTING STARTED

Three steps, no command line

1

Set up

Run install and start on the organisation's server or laptop, enter the licence code. The same for the officer's laptop.

2

Announce

Put the one QR code on the notice board or in the intranet.

3

Pilot

Start with one location. Look at the first cases together, then roll out.

WHERE WE STAND

Tested by us. Not audited. Not certified.

Done

Reporting, case numbers, status and deadlines run between the app, the browser and the dashboard. Encryption was checked byte for byte against a second, independent implementation.

Next

Tests on real devices, access for more than one officer, case export, an independent audit.

unpruuf Compliance supports your process. It is not legal advice and not a certification. Whether the national law is fully met is for your legal department to confirm.

NEXT STEPS

One pilot.
Your channel.

We look at your organisation together and set up the pilot.
